To set your computer back to DHCP from a fixed IP on Windows 7:

1. Go to (Start)
2. Click on Control Panel
3. Choose Network and Internet, Network and Sharing Center, Change Adapter Settings
4. Right-click Local Area Connection and Choose Properties
5. Highlight Internet Protocol Version 4 (TCP/IPv4) and click Properties
6. Check the boxes “Obtain an IP Automatically” and “Obtain DNS Server address automatically”

7. Click **OK, Close** out of all window

8. If your computer is properly registered on the network and is connected to a live network port, you should get onto the LAN.
